### Description

#### Item Specifics

Item Type : **Meteorites & Tektites**  
Type of Mineral : **meteorite**

Form, Shape: **Rough**  
Specimen Type: **Rare Species**

**This auction is for a nice piece of Meteorite from Lake Huron Meteor crater.**

**The specimen was recovered from Lake Huron in August of 2006.**

**It measures about 4 inches by 2.75 inches by 1.25 inches, and it weights about 8oz. (or about 225g)**

**( If you are looking for a bigger Meteorite please check my other auction )**

"With the help of magnetic sensors, scientists have detected a rimmed circular structure, 30 miles in diameter, more than a mile beneath the floor of Lake Huron. They believe the magnetic ring marks a buried crater -- potentially one of the largest known -- blasted by a meteorite meteorite, meteor that survives the intense heat of atmospheric friction and reaches the earth's surface. Because of the destructive effects of this friction, only the very largest meteors become meteorites..... "

**You can find more information about Lake Huron Impact Crater by going to the link below:**
